DESCRIPTORS. *Rayon fibers. Processing. *Textiles.
*Synthetic fibers. Quality control.

Wet bars 2 or 3 mm wide, which may extend over 4 mm or all of the fabric width may occur during finishing as a result of the penetration of stenter pins in the direction of the warp. Individual tension shiners in a 2:2 alternation over the entire width are regular, since the shuttles and bobbins are responsible for this defect. Wet bars up to the width of one unwinding of the bobbin, (Materials--Textiles, TT, v. 6, no. 7) (over)
